

Table 1: Baseline demographics and medical history characteristics. Data in brackets are range (“-”) and % (“/”). Abbreviations: NMI- no mutation identified, AEDs- antiepileptic drugs, VGB- vigabatrin, VPA- valproic acid, TPM- topiramate, LTG- lamotrigine, LEV- levetiracetam, CLB- clobazam, OXC- oxcarbazepine.

Mean age at inclusion (years)	4.1 (0.9-14.3)
Male/Female (%)	16/16 (50/50)
Mutation: TSC1/TSC2/NMI/no data (%)	3/18/1/10 (9/56/3/32)
Mean age at first seizure (months)	6.6 (0-30)
Mean seizure frequency per day at baseline	8 (1-10)
No. of AEDs at baseline (median)	3 (1-4)
AEDs used at baseline:	VGB-28 pts VPA-23 pts TPM- 10 pts LTG- 9 pts LEV- 8 pts CLB- 5 pts OXC- 1 pt
