

**Legend:** *Left:* Outliers from the CCEPs versus distance relationship in Pt #1 are associated with stimulation to the anterior cingulate (aCg) and recording in the anterior insula (Ins) or the precuneus (PreC). A power law fit is shown (red), as is one standard deviation above this fit (black dotted line). *Right:* A sagittal T1 MRI is overlaid with the site of stimulation to the anterior cingulate (two red dots) and location where CCEPs were recorded in the precuneus (single red dot), along with proposed pathway connecting them via the cingulum bundle (yellow dotted line).
