

How to implement Barriers Adherence Assessment

Electronic Health Record

Collaboration

Collaborate with your local IT or EHR individuals to build the Barriers Assessment Tool into your records.

Pre-Visit Completion

Patients/families can complete these in clinic or before clinic appointments.

Automated Flagging

The EHR may be able to flag any positive responses on this form – check if this is possible.

Integrated Documentation

Data from flowsheets can then be integrated into clinical notes/encounters.

Paper and Pencil Format

Check-In Paper Forms

Can provide paper versions at check-in or in the exam room.

Appointment Review

Review the information at the beginning of the appointment.

Clinical Note Entry

Add smartphrases or find easy ways to add the information to your clinical note/encounter.

Resource Follow-Up

Have copies of handouts and strategies readily available if barriers are endorsed.
